Stealth	21-22
The Legend	23-28
Options	29-30

**COBALT KINETICS** was founded because of dissatisfaction with the status-quo rows of the same black rifles on every gun shop wall across the country. The issue with "black rifles" is that there is little differentiation in the market and very little true innovation. Cobalt decided to change the industry by demonstrating that common functions can be upgraded through thoughtful engineering. Also, platform flaws, such as muzzle rise, can be mitigated by use of a muzzle compensator paired with improvements to the buffer system. These changes can be done while still creating a rifle that maintains precision, durability and performance. Cobalt is driven to create firearms that are more effective, more reliable and more rewarding for the shooter.

# DUAL DROP

Cobalt's patented Dual Drop augments the functionality of the AR-15 platform. Dual Drop combines ambidextrous forward assist controls with the traditional bolt catch. Pressing either forward assist button operates the bolt release

Dual Drop maximizes economy of motion while maintaining safe operation. The thumb of the shooting hand operates the bolt release in a fast, instinctive motion; while the trigger finger is only tasked with firing the weapon.

From an empty, locked open condition, the Dual Drop has been measured to get a gun reloaded and back on target up to .52 seconds faster than conventional controls, and up to .27 seconds faster than after-market accessories claiming to achieve the same functionality.

# C.A.R.S.

## Cobalt Advantage Reload System

The C.A.R.S. autonomously drops an empty magazine and loads the chamber once an ammunition supply is present. When using a C.A.R.S. rifle, the user is only required to pull the trigger, and introduce a fresh magazine as ammunition becomes exhausted.

More time can be spent on target acquisition and engagement, allowing for faster and more accurate shooting. The C.A.R.S. retains the standard operation of the AR-15 platform; the bolt catch and magazine release are still present and operational.

# B.A.M.F.

**BILLET ALLUMINUM MODERN FIREARM.** The original Cobalt Kinetics carbine. Favored by many for its versatility and competence in any shooting environment, the B.A.M.F. has remained a prominent figure in the AR-15 market since its introduction in 2015.

## CALIBER

- .223 Wylde

## CONTROLS

- Dual Drop Bolt Release
- Fully Ambidextrous Controls
- Short-Throw Safety Selector
- Extended Magazine Release

## UPPER AND LOWER RECEIVER

- 7075 Billet Aluminum
- Mated Receiver Sets
- Beveled Magazine Well
- Detachable Trigger Guard
- Black Nitride Bolt Carrier Group

## BARREL

- 4150 CMV Steel
- 5R Rifling 1:8 Twist
- Lithium Iron Treated

- **16" EDGE MUZZLE BRAKE**
- **14.5" PINNED AND WELDED LINEAR COMP**

## HANDGUARD

# TEAM

The TEAM is Cobalt's competition dominating rifle. All aspects of the design were refined in collaboration with iconic professional shooters. The TEAM Rifle's shooting prowess has been proven and continues to deliver constant podium wins in the 3 Gun Circuit and other arenas. Receivers, handguard, and stock are machined from 7075 billet aluminum to maintain superior quality and fit. After final construction, these main components are collectively serialized.

# GLORY

# 300 BLACKED OUT

The name says it all. Based off of the Cobalt Kinetics B.A.M.F. Edge, an all flat black rifle with a 14.5" nitrocarburized 1:8 twist 300 blackout barrel with a pinned & welded linear compensator give this all billet rifle an aggressive look.

Properly named, this Cobalt Kinetics B.A.M.F. style rifle features all of the precision machined quality components and design features expected from the brand, as well as a one-of-a-kind battleworn dark earth and armor black American flag cerakote finish.

# SIGNATURE SERIES

## CHIEF

Those who served with Chris referred to him as Chief. Cobalt Kinetics commemorates him with the "Chief" in 6.8 SPC. It features a 14.5" fluted stainless match barrel that is permanently mated to Cobalt's linear compensator. Premium single stage trigger, and a subdued tiger stripe finish sets this rifle apart.

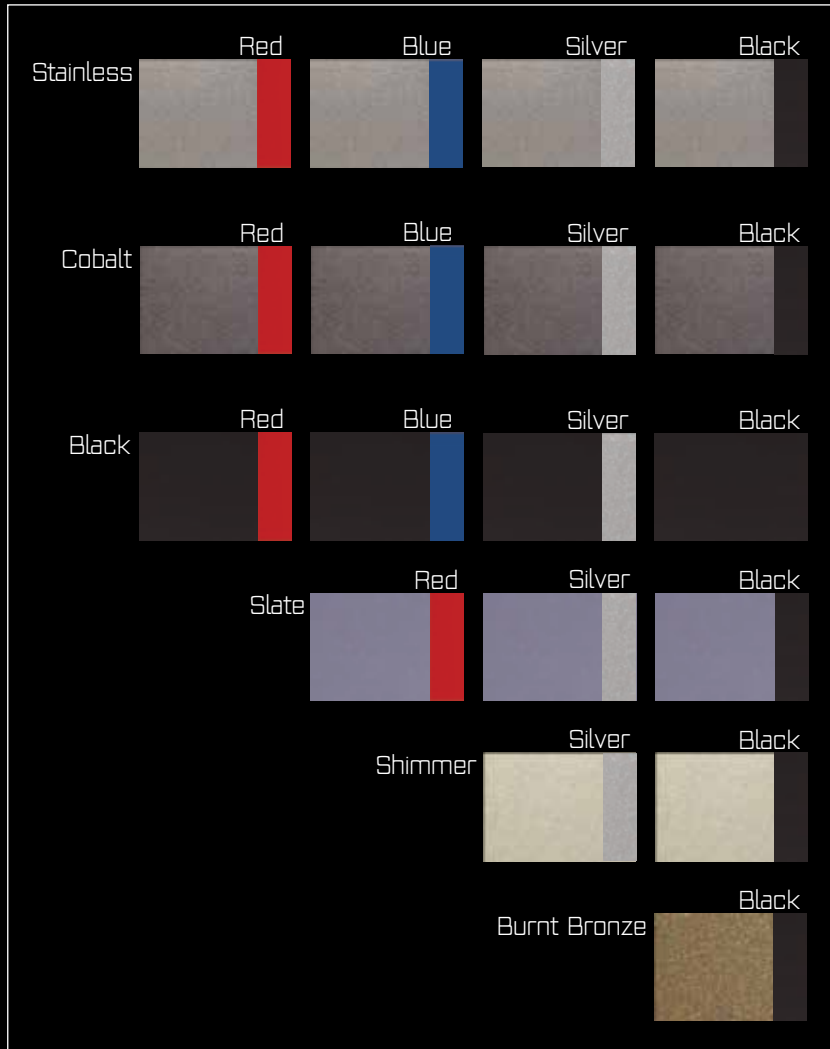

As it should, the signature rifle in the collection boasts a distinguished list of features. Among which include: 18" stainless fluted button rifled barrel, ATC Gold trigger, Cobalt Kinetics adjustable stock, premium nickel boron bolt group, Vortex flash hider, custom cerakote, polished details and stainless hardware. The rifle proudly bears Chris Kyle's signature laser etched from the grip through to the lower receiver.. It is sure to become a sought after collectible.
